Feature overview:

The Crosstech Solutions technology team developed this software to simplify and automate the main business processes in food distribution companies. The following links in their value chain have been identified:

- Purchases from suppliers.
- Sales.
- Returns management.

Quick Start Guide:

This section will help you register and take your first steps in the system.

To start the program for the first time, you must log in with the default administrator account.

Username: Password:

- Once you are inside the system, in the Administration option you can change your password (Cambiar Contraseña) and select the system language (Cambiar Idioma).

- In the Administration option you can create new users (Gestión de Usuarios) and configure their permissions (Gestión de permiso). In the same tab you can also edit or add languages in the system (Gestión de Idiomas) and access the change and event log (Gestión de Bitácora). For security reasons you can create system backups (BackUp-Restore) and, through Control de Cambios, restore the system to an earlier point in time.
- You will have the Entidades tab to register data for your suppliers and customers. In the Gestionar Productos tab you will be able to register and manage your company's product data.
- The system provides intelligent reports to improve business processes and support decision making.

Business Processes

This section describes the business processes that are covered by the system.

Management of Supply Purchases

1. The purchasing manager opens the Compras tab and selects the "Realizar compra" option. In this section they can create a purchase request. They choose the category of products they want to buy (Fiambres, Quesos, Encurtidos, Almacén). They can search for the product by name, select its brand and supplier, and see the displayed price, which can be adjusted if necessary. If the product does not yet exist in the system, they can create it by entering the brand, price, and supplier.
2. After selecting the product, the required quantity must be entered (in kg or units) and the payment method selected (Efectivo, Crédito, Débito, Transferencia or Mercado Pago). Once these fields have been completed, the purchasing manager clicks the "Agregar a Lista" button to add the product to the purchase list.
3. The purchasing manager can add more products from the same supplier to the list or remove any of them. When the list is complete, they can generate the purchase order by clicking the "Generar Orden de Compra" button. This creates a detailed record for that order and stores the key data: order detail, total amount, payment method, date, supplier, and status of the order.
4. In the Control option, the manager can access "Evaluar Órdenes de Compra". The manager is responsible for approving or rejecting requests to create new products and suppliers, as well as the purchase orders themselves, setting their status to "Aprobada" or "Rechazada".

5. If the order includes a product or supplier that is not yet registered in the system, a warning message is shown. When entering the purchase, the system allows the purchasing manager to register new products or suppliers.
6. Once the order has been approved, the purchasing manager can see it in the list of open orders ("Órdenes pendientes"). By using the "Realizar Pago" button they can record the payment and change the order status to "Abonada".
7. When the goods arrive, the stock clerk (Repositor) verifies the delivery. In the system they indicate whether the order was received completely and correctly or if there were any issues, and can add comments if necessary.

Management of In-Store Sales

1. The customer tells the salesperson which products they wish to buy and in what quantity, mentioning the product name, type, brand, and quantity.
2. The salesperson checks on the system screen whether there is stock for the requested products. If a product is not in the catalog, the salesperson offers similar alternative products, again indicating name, type, brand, and quantity.
3. If the customer accepts the alternatives suggested by the salesperson, the salesperson selects the available products in the system catalog to create the order (name, type, brand, and quantity). The salesperson also asks the customer for their personal data (DNI, first name, last name, etc.) in order to associate the order with that customer.
4. At the same time, the customer goes to the checkout. If the customer has already made purchases before, they are already registered in the system. Otherwise, the salesperson asks for the necessary data: DNI, last name, first name, address, telephone number, and email.
5. The cashier sees on the system screen the data of the products previously selected. Then they confirm the sale of the products in the order and collect the payment from the customer. The relevant data are: product code, product name, quantity, price, tax, total sale amount, date, and time.
6. The customer pays for the purchase with credit card, debit card, or cash.
7. If the customer pays with a card, the cashier must record additional information such as bank, card type, card number, expiration date, amount to be charged, DNI, first name, and last name.
- 7.1. After completing the payment, the cashier prints a two-part invoice (Factura). The original is given to the customer and the copy remains at the checkout to be recorded in accounts receivable.

- 7.2. The customer goes to the stockroom with the original invoice and hands it over so that the goods can be delivered.
8. The dispatcher (Despachador) checks in the system whether the invoice data match the purchase recorded in the system.
9. If everything is correct, the dispatcher records in the system that the goods have been delivered to the customer and a delivery note (Remito) associated with the invoice is issued.
10. To complete the sales process, the dispatcher delivers to the customer the products corresponding to the invoice presented and has the customer sign the acknowledgment document.

Frequently Asked Questions (FAQ)

How do I create a user?

Go to:

Administración -> Gestión de Usuarios -> Agregar

What is the password for new users?

The password of a new user is the one assigned at the moment the account is created.

What is the username for new users?

The username for new users is the one assigned at the moment the account is created.

Can a user be modified?

Go to:

Administración -> Gestión de Usuarios -> Modificar
